MONTHLY REPORT

25X1

PAR 213

10 July 1964

SUBJECT: Color Reproduction Systems Review

TASK/PROBLEM

1. In view of the recent importance attached to color photography by the intelligence community, investigate and determine the most suitable means to reproduce and utilize multiple copies of color materials. Determine the most suitable reproduction system and types of equipment to be used in all phases of the reproduction cycle. Also, attempt to define how color photography can best be utilized by the photo interpreter.

DISCUSSION

2. After reviewing PAR progress with the customer representative, it was generally agreed that the demonstration material should be generated from a high-altitude original. This step avoids the need for qualification and conjecture as to what the best duplicating materials would be. Otherwise, originals now available have many qualifying aspects as to how good or typical they really are at high altitude.

3. In view of the above and as indicated in Quarterly Progress review,  dated 25 June 64, preparation of briefing aids will be delayed pending receipt of high-altitude photography.

PLANNED ACTIVITIES

4. Upon receipt of high-altitude color acquisition materials accomplish evaluation and prepare briefing aids as requested.

Declass Review by NGA.
